                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              B
                     This sequence encodes the broad bean raffinose synthetase of the invention. The raffinose synthetase is capable of producing raffinose by combining a D-galactosyl group through an alpha (1-6) bond with a hydroxyl group attached to the carbon atom at position 6 of a D-glucose residue in a sucrose molecule. The DNA can be used to modify metabolism of a host organism by introducing into the host organism or its cell so that the content of the raffinose family oligosaccharides in the host organism or cell is changed. Raffinose oligosaccharides are useful as food additives with beneficial effects on the gastrointestinal flora.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2316

The sequence is isolated from plant material of broad beans. The protein forms raffinose by complexing alpha(1 to 6)- D-galactosyl hydroxyl group of the 6C of D-glucose residue in sucrose molecules

Raffinose synthase is involved in the biosynthesis of raffinose and higher homologues in the raffinose saccharide family from sucrose. The present sequence is useful for reducing the raffinose saccharide content of soybean seeds which improves the nutritional quality of the soy protein products derived from them.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids and encoded proteins involved in the biosynthesis of raffinose, useful for producing soybean seeds with a reduced raffinose content and therefore improved nutritional quality -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2;

This sequence encodes the Japanese artichoke raffinose synthetase of the invention. The raffinose synthetase is capable of producing raffinose by combining a D-galactosyl group through an alpha (1-6) bond with a hydroxyl group attached to the carbon atom at position 6 of a D-glucose residue in a sucrose molecule. The DNA can be used to modify metabolism

The sequence is isolated from plant material. The protein forms raffinose by complexing alpha(1 to 6). D-galactosyl hydroxyl group of the 6C of D-glucose residue in sucrose molecules.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              망
       This is the nucleotide sequence of a rapesed cDNA clone coding CC for raffinose synthase (see AAY32075), a protein which can bind a CD -galactosyl group through an alpha(1-6) bond to the hydroxy group cattached to the carbon atom at the 6-position of the D-glucose residue in a sucrose molecule to form raffinose. The cDNA was CI isolated from rapeseed cv. Westar leaf cDNA by PCR. Probes or CPCR primers generated from plant raffinose synthase genes (see CAX20207-10) may be used to obtain other raffinose synthase genes may be used to control the levels of raffinose produced in plants. CPC and sense genes can be used to knock out existing gene activity, CPC and sense genes to increase the level of gene activity. The resulting transgenic plants may be used as a food source to alter the growing conditions for gut enterobacteria, providing general CPC health advantages. The sense and antisense genes may also be used in gene and phenotypic analysis of plants and for the selection of CPC plant clones with the desired characteristics with respect to

                                                                                                                                                                                                                                                                                                                                                                                                                                                       This is the nucleotide sequence of a soybean cDNA clone coding C for raffinose synthase (see AAY32072), a protein which can bind a CD-galactosyl group through an alpha(1-6) bond to the hydroxy group c attached to the carbon atom at the 6-position of the D-glucose cresidue in a sucrose molecule to form raffinose. The cDNA was consisted from soybean cv. Williams 82 immature seed cDNA by PCR. Probes or primers generated from plant raffinose synthase genes (see AAZ20207-10) may be used to obtain other raffinose synthase genes by labeled detection or amplification (claimed). These genes may consistent the levels of raffinose produced in plants. Antisense genes can be used to knock out existing gene activity, and sense genes to increase the level of gene activity. The cresulting transgenic plants may be used as a food source to alter the growing conditions for gut enterobacteria, providing general chealth advantages. The sense and antisense genes may also be used in gene and phenotypic analysis of plants and for the selection of plant clones with the desired characteristics with respect to

The month old greenhouse grown plants were deprived of water for 3 days prior to harvesting the stressed leaf tissue. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a xhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by xhoI digestion. The cDNA fragments were directionally cloned into the EcoRI. YhoI restriction site of the pBluescript vector. The
                                                                                                                                                                                                                                                                                                                                           ligated cDNA fragments were transformed into DH10B cells (GibcoBRL). This library was constructed in t laboratory of Dr. Randy Shoemaker."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The cDNA library was constructed from mRNA isolated from drought stressed leaf tissue of the cultivar Williams 82. The month old greenhouse grown plants were deprived of water for 3 days prior to harvesting the stressed leaf tissue. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."

Patent No. 6114158
GENERAL INFORMATION:
APPLICANT: L1, Xin-Liang
APPLICANT: L-Jungdahl, Lars G.
APPLICANT: L-Jungdahl, Lars G.
TITLE OF INVENTION: Orpinomyces Cellulase Celf Protein and Coding Sequences
FILE REFERENCE: 33-98sequence listing
CURRENT APPLICATION NUMBER: US/09/118,319
CURRENT FILING DATE: 1998-07-17
NUMBER OF SEQ ID NOS: 9
COCRETE TO COMMERCE OF COMM
sequence 19, Application US/09457046B
Patent No. 6287835
